## Factory map overview

The Factory Map widget provides a visual and intuitive way to monitor your production environment directly from your WATS dashboard. It displays your client test stations and/or levels as movable boxes on a customizable background, allowing you to mirror your actual factory layout and view real-time performance immediately.

## Key features

### Visual and Interactive Monitoring

- View real-time statistics directly on the map. You can display up to two of the following metrics:
  - Test report #
  - Unit #
  - FPY #
  - TRY #
- Quickly understand performance across production lines and stations through an intuitive visual layout.

- The boxes display the client's name, selected statistics, status indicators (active, inactive, or offline), and yield tags (FPY, SPY, and LPY). They also include an action menu that allows you to drill down into related reports, access WATS Alvea suggestions, or use the selected client as context for WATS Alvea Assistant.

### Customizable factory layout

- Upload an image of your factory floor to use as the map background.
- Position boxes to match your actual production setup.
- Lock the layout once the configuration is complete.
