

WATS Feature Release Note
Analytics PDF Export – 26.3

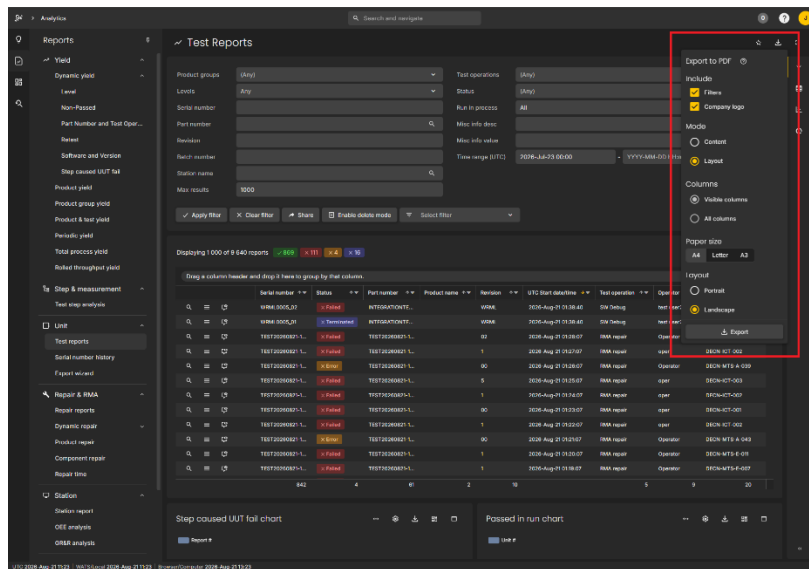

Major Feature Areas

- PDF export in Analytics 3
 - Content and Layout modes 3
 - Searchable, selectable output..... 3
 - Dashboard export..... 4
 - Process heatmap export 4
- Dashboard email PDF export deprecation 5

PDF export in Analytics

PDF export is now available across most of Analytics, including dashboards and the Process Heatmap, so grids and charts can be exported together in one document.

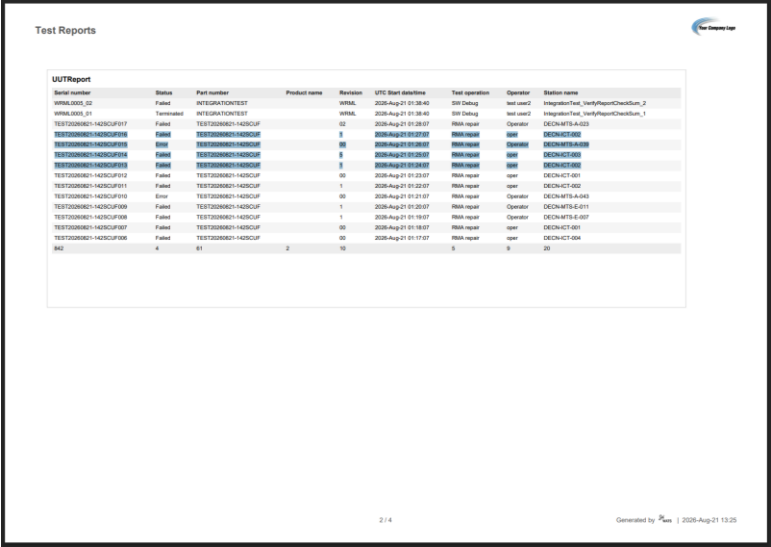

Content and Layout modes

Content mode composes the page for paper and allows sections and grids to continue across as many pages as required. Layout mode reproduces the current screen and exports only what is visible.

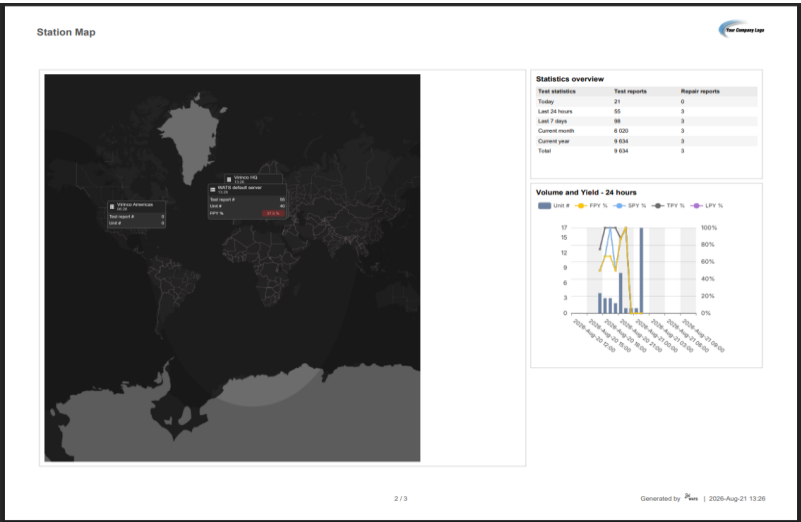

Searchable, selectable output

Grids are exported as text tables, so values can be selected, searched and copied from the PDF, and row grouping and tree levels are retained. Charts and maps are exported as images, rendered in a light theme suited to printing. Reports that use parameters include those values as a parameter table, so the exported figures can be traced back to the input that produced them.

Dashboard export

A complete dashboard, including Web viewer, Station maps, Factory maps, charts and grids, can be exported as a single PDF for sharing or archiving.

Process heatmap export

In Content mode, the entire heatmap is exported as a searchable text table, including rows and process columns that are not visible on screen. In Layout mode, the heatmap is captured as shown.

Dashboard email PDF export deprecation

Dashboard subscription emails no longer include attached PDF files. From WATS server version 27.1, dashboard PDF attachments in subscription emails are no longer supported. To view or export a dashboard as PDF, open the dashboard in WATS and use the PDF export option. [Read more about this deprecation.](#)
