D2026

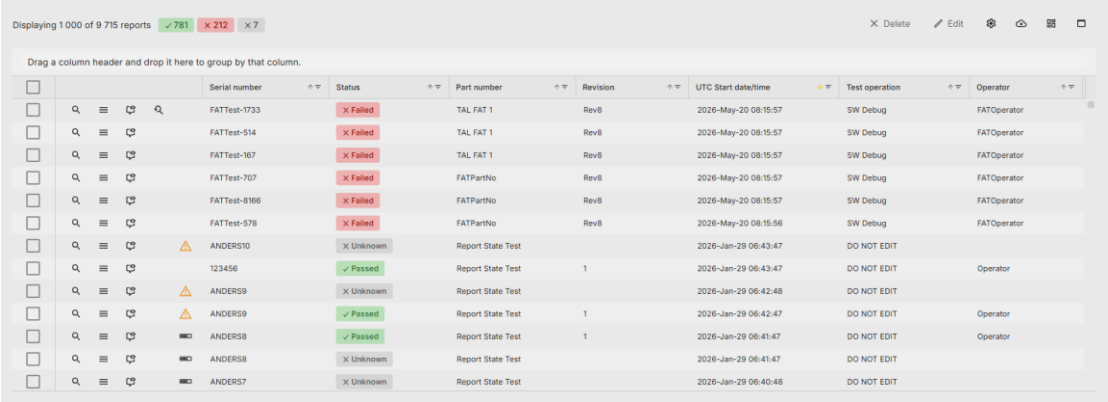

WATS Feature Release Note
Multi-edit UUT and UUR reports 26.3

Major Feature Areas

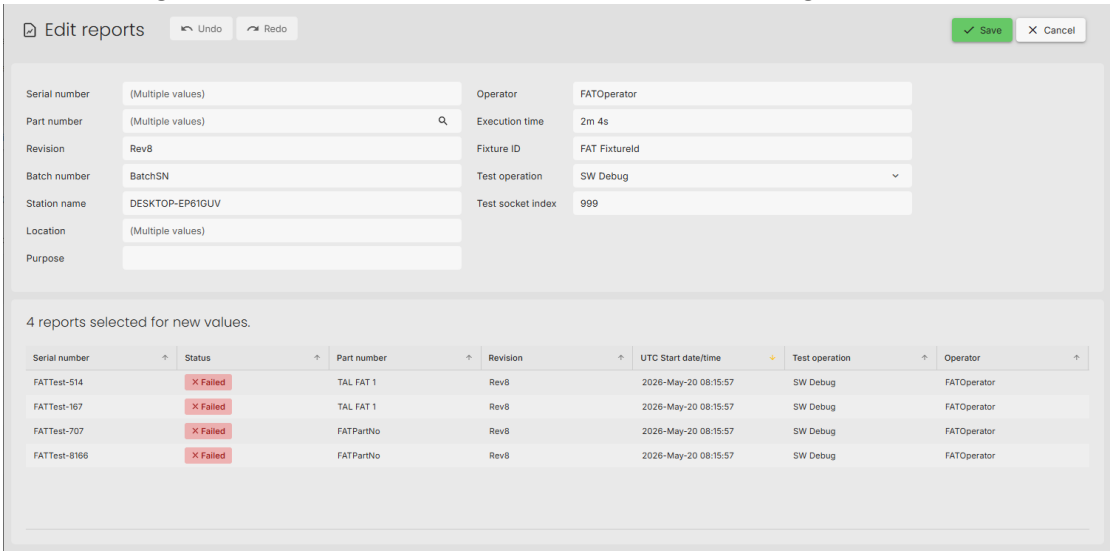

Multi-edit UUT and UUR report headers 2
Enable delete mode 4

Multi-edit UUT and UUR report headers

The Test report page and Repair report page now allows you to multi-edit UUT and UUR report headers directly by selecting the reports you want to edit.

When clicking the Edit button, the editor will be available for editing.

The editor lets you edit:

- Serial number
- Part number
- Revision
- Batch number (UUT only)
- Station name
- Location
- Purpose
- Operator
- Execution time
- Fixture ID (UUT only)
- Test operation
- Repair operation (UUR only)

- Test socket index (UUT only)

When multiple reports are selected, and some of these reports have different values there will be displayed a placeholder (Multiple values), these fields will still be able to be edited.

There is also the possibility to undo and redo changes, as well as cancel and save. Once the changes are saved it may take a few minutes for the reports to be updated.

Enable delete mode

The separate **Enable Delete Mode** step has been removed. Users with the required permissions can now select rows directly, and the delete action is always visible.
